

Quick Guide. (only edit the files from **Server_Panel_Deluxe(Custom Settings)**, don't change anything in the **Server_Panel_Deluxe** folder)

Firstly i recommend making a github account if not already

<https://github.com/>

This is where you will upload all of the quick link images like whats in the **Upload** folder under **Server_Panel_Deluxe(Custom Settings)** folder. This also includes the link files to match each icon. This being discord or whichever icons you want as they can be changed to your liking.

your github will look sort of like this below.

Part 1.

Make a custom banner to suit your server and up load it to github, there is a template you can use in the upload folder open that with a program like Gimp <https://www.gimp.org/> as the banner is already set to the size that's required.

Once its uploaded click on the image file in github, once the image loads right click on the image and open in a new window. This will give you the correct URL address needed to be added into the **windows.xml** file in **Server_Panel_Deluxe(Custom Settings)\Config\XUi_InGame**

If you don't wish to use an image as the banner and would like just text, simply remove the URL linking to a banner image and make sure you have the required tile in line of code below in the same XML file from above windows.xml

```
<!-- Title: -->
<set xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='header']/label[@name='headerTitle']/@text_key">Server Name Goes Here</set> <!--text-->
<remove xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='header']/label[@name='headerTitle']"/>
```

Part 2.

In the same XML if you scroll down you will see the link 1 – 4, this is where you can change the urls to link to your github account and you can also change the name of each quick link.

The first line is the name of the quick link for example discord

The second line is where you put the url from your github for the icon you wish to use for the quick link

The third line is where you put the url from your github which links the quick link button to the LinkURL file. The LinkURL file is where you have the web url put in, so when you click on the quick link button it knows where to direct you or others. (check the image above showing the files in the github)..

Also keep in mind you don't have to use all the quick links they can be removed to only use 1 or 2 quick links, simply just have to add the `<!------->` from the start and end of the last line code.

```
<!-- Link 1: -->
<set xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='links']/rect[@name='link1']/rect/button/@toolTip" server_stock</set> <!--hoverText-->
<set xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='links']/rect[@name='link1']/texture/@texture" server_stock</set> <!--icon-->
<set xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='links']/rect[@name='link1']/rect/@sources">h
<!-- disable -->
<!-- <remove xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='links']/rect[@name='link1']"/> -->
```

Part 3.

The Tab buttons, these can be edited in the same xml file that you have been working on above.

Here is where you can change the icon for each tab and this is also where if you want an image to be used over having just text.

look at the coding for the image in Tab 1, to add an image to the other tabs, you copy all of that code for the image and add to the other tabs if required.

To change the icon it's the second line of code, this must be in built icon from the game or you can copy ones already being use to have them all the same.

```
<!-- TAB 1 -->
<!-- Button -->
<set xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='tabs']/rect[@name='tabsContents']/rect[@name='content1']/rect/button/@toolTip" server_stock</set> <!--hoverText-->
<set xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='tabs']/rect[@name='tabsHeader']/rect[@name='button1']/sprite/@sprite" server_stock</set> <!--icon-->
<set xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='tabs']/rect[@name='tabsHeader']/rect[@name='button1']/sprite/@color">[white]</set> <!--color-->
<!-- Title -->
<set xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='tabs']/rect[@name='tabsContents']/rect[@name='content1']/rect/label/@text_key" spd_ButtonTitle1</set> <!--text-->
<!-- Content -->
<set xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='tabs']/rect[@name='tabsContents']/rect[@name='content1']/label/@text_key" spd_TabContent1</set> <!--text-->
<!-- Extras -->
<append xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='tabs']/rect[@name='tabsContents']/rect[@name='content1']">
  <!--Example Image (removeable)-->
  <texture name="webImage" depth="60" pos="384,-395" width="559" height="390" pivot="center" texture="https://raw.githubusercontent.com/BPMVT/Info-Panel-Standard/refs/heads/main/Australia-6K.jpg"/> <!--imgURL-->
</append>
```

Keep in mind Tab 5 has code for an extra button, this can be used as a support button or anything you like. Its default it labeled support but it can be changed to which ever you like. And the linking process is the same as above you add the url in the code to the linkurl file added to your github, or you can add say a QR code image you just have to add this line of code thats highlighted in yellow.

```
<append xpath="/windows/window[@name='windowSPD']/panel[@name='core']/rect[@name='tabs']/rect[@name='tabsContents']/rect[@name='content5']">
  <rect name="content5extra_button" depth="30" height="46" width="250" pos="259,-630" controller="NewsWindow" sources="https://raw.githubusercontent.com/BPMVT/SCG/refs/heads/main/linkURL 4.xml">
    <button name="btnLink" hoverscale="1" defaultcolor="100,100,100,255" disabledcolor="0,0,0,1" hovercolor="100,100,100,100" type="sliced" enabled="{has_link}" gamepad_selectable="{has_news}" t
    <label name="btnText" depth="31" pos="0,-6" font_size="36" color="255,255,255" justify="center" text_key="content5extra_buttonText" effect="Outline8" effect_color="0,0,0,255" effect_distance
  </rect>
  <texture name="customDisoordQr" depth="60" pos="384,-395" width="300" height="300" pivot="center" texture="https://raw.githubusercontent.com/BPMVT/SCG/refs/heads/main/SCG-Disoord-QR.png"/>
</append>
</eihwaz.de>
```

Part 4.

Localization.txt (in the same folder as the windows.xml from above) you dont need to edit this any more, please edit the Localization.csv

This file is where you type in everything you want for each tab. Once you open the file you will see what can be changed to suit

Key,Context,English

```
HEADER,,,
spd_headerTitle,UI,Eihwaz Up?!
spd_headerMotto,UI,"7 Days [e7d27c]Deluxe[-] Modlets","7 Days [e7d27c]Deluxe[-] Modlets"
spd_readAll,UI,"WELCOME. PLEASE READ ALL SECTIONS."
spd_Close,UI,CLOSE
```

```
LINKS,,,
spd_link1,UI,DISCORD
spd_link2,UI,TWITCH,TWITCH
spd_link3,UI,YOUTUBE,YOUTUBE
spd_link4,UI,LINKTREE,LINKTREE
```

```
TABCONTENT,,,
spd_Button1,UI,MAP
spd_ButtonTitle1,UI,MAP
spd_TabContent1,UI,"[6960EC]Curernt Map"
```

```
spd_Button2,UI,RULES
spd_ButtonTitle2,UI,RULES
spd_TabContent2,UI,"[E23A04]Rules[-] [ffffff]
- Here is where you put all your rules
- Or an image can also be used
```

```
[1589FF]PVP RULES!!![ffffff]
- You can set up certain words in what colour you like also by putting the colour code infront of the w
```

```
spd_Button3,UI,COMMANDS
spd_ButtonTitle3,UI,COMMANDS
spd_TabContent3,UI,"[FFA500]The List Of Commands Are Listed Below...[FFFFFF]
```

You can make all parts of the text different colours. You just have to put in the text colour code in front of it and then another colour code after it for example

[1589ff]PVP Rules!!! [FFFFFF] – these are the rules you put in.

You can also use an image for each tab if you wish, to do this it simple add the code above thats highlighted in yellow to each tab in the customer settings/config/XUi_InGame/windows.xml

Part 5.

After edited to your likening you just have to upload the folder to the mods folder on your server, it will look like this on your server

ScrapPolymerRecipe	28/06/2025 7:35:45 PM
Server_Panel_Deluxe	31/01/2026 1:08:43 PM
Server_Panel_Deluxe(Custom Settings)	31/01/2026 1:08:44 PM
Starter Bundle	28/06/2025 7:35:46 PM

Make sure that two folder are not in another folder on the mods folder or the mod wont work.
